Skills

Programming: Java, Python

Projects

Footstep Electricity Generation *Mini Project*

- Developed a prototype for generating electrical energy from footsteps using **piezoelectric sensors** and an **Arduino** microcontroller.
- Designed the system to convert mechanical pressure from footsteps into electrical energy and demonstrate energy harvesting.
- Worked on sensor interfacing, circuit design, Arduino programming, and system testing.

Experiences

Student / Engineering Project Experience *Academic*

- Applied programming and engineering concepts to develop academic projects and prototype-based solutions.
- Gained practical experience in **Java, Python, Arduino**, sensor interfacing, and basic problem solving.

Achievements

- Successfully developed and demonstrated a **footstep electricity generation** prototype using piezoelectric sensors.
- Participated in academic project development involving hardware and software integration.

Education

Vidyavahini Vidhyanikethana School, Karnataka **2022–2023**
SSLC **CGPA: 93.44**

Vijaya PU College, Tumkur **2024–2025**
Pre-University **CGPA: 87**
